

Flu Protection You Can Trust

At TotalWellness, we've been helping companies create healthier, happier workplaces since 1998. From our very first flu shot clinic to the thousands of events we now coordinate each year across the U.S., our mission has always been the same: make preventive care easy and accessible.

About This Year's Vaccine

Your clinic will be using Fluzone®, a seasonal influenza vaccine manufactured by Sanofi. As a global leader in vaccine production, Sanofi supplies millions of doses each year and produces approximately 40% of the world's influenza vaccines.

Clinical Specifications

- **Vaccine Type:** Fluzone® is an inactivated influenza vaccine. This means the virus is not live and cannot cause the flu.
- **Formula:** This is a trivalent vaccine, formulated to protect against three specific strains: two influenza A strains and one influenza B strain.
- **Purity:** The vaccine is delivered in a single-dose, pre-filled syringe that is preservative-free, containing no thimerosal.
- **Approval:** Licensed by the U.S. Food and Drug Administration and produced to meet stringent U.S. manufacturing and safety standards.

Quality & Safety Protocols

We maintain rigorous standards to ensure the potency and safety of every dose administered:

- **Cold Chain Management:** Strict temperature monitoring is maintained from the manufacturer to the moment of administration to ensure vaccine potency.
- **Professional Administration:** Vaccines are handled and administered by licensed healthcare professionals following Centers for Disease Control and Prevention (CDC) guidelines.
- **Ongoing Oversight:** Sanofi maintains a long track record of safety backed by extensive clinical research and works continuously with the CDC and FDA to monitor vaccine safety after distribution.
